Fire Weather Summary

Following the busy 1994 fire season, national fire activity in 1995 was well below normal. The quiet season is attributed to a well developed El Niño event that caused above normal precipitation over the West and Gulf Coast states during the winter and spring. There was, however, severe drought in New England and the Lake States that resulted in fire activity in the Eastern Region. In addition, fire activity occurred in the Southern Region, Southwestern Region, and lower elevations of the Intermountain Region.

Eastern Region

Atmospheric conditions caused by El Niño kept much of the Atlantic Seaboard unusually dry, causing several states in the east to experience one of the 10 driest springs on record. In May, several states reported periods of high fire danger.

In July, abnormally hot weather, including a deadly heat wave, dominated throughout the Region. Below normal precipitation in New England and the eastern mid-Atlantic persisted during the month of August and created severe drought-like conditions.

In October and November, an upper-air pattern delivered wet fall weather across the region, bringing an end to the long-term drought in New England and the mid-Atlantic.

Fire Weather Summary

Intermountain Region

The Intermountain Region experienced cool and unsettled conditions through June. However, in July, lightning caused several large grass and brush fires. In August and September, dry lighting caused moderate large-fire behavior.

Pacific Southwest Region

California's fire season began late due to heavy snow pack (357% of normal as of May 18, 1995) and cool, unsettled weather that continued through most of June. By late July, near record high temperatures were experienced in Southern California and by the first two weeks of August much of California experienced significant large-fire activity. During the last week of August, extreme burning conditions were reported in Southern California.

Most of the fire activity in the United States occurred in California during the last three months of the year. This activity was caused by moderate Santa Ana winds, which on November 28 caused large fires on California Department of Forestry lands.

Southern Region

From January through April, the Southern Region experienced its most active spring fire season in five years. Weather changes in mid-April brought relief and green-up soon occurred. Several hurricanes impacting the Southern Region produced large amounts of rain causing this Region to report very little fire activity during the fall fire season.

Southwestern Region

The winter and spring weather patterns kept the Southwestern Region mild except for the lower elevations, where moderate fire activity was experienced in June. Minimal moisture from the monsoons provided some relief on July 16. However by late July a summer weather pattern was established that ended the monsoons, record heat covering the southwest desert followed.

During August, the two largest fires in the nation occurred on the Salt Lake District, BLM. On August 11, the monsoons began in earnest, relieving the Southwestern Region from its extended fire season.

Fire Activity Summary

The winter of 1994-1995 provided above average precipitation and snow pack across most of the United States. In general, temperatures across the lower 48 states remained above normal due to a strong and persistent west to east upper level flow, while a strong jet stream brought above normal precipitation to the south, mainly from California to Texas. By March 1, snow packs for the much of the west exceeded 100%, with California reporting 149% above average. According to the Palmer Drought Index, areas of drought had diminished significantly from the previous year. Only small areas of severe and extreme drought were being reported in Eastern Washington, Oregon, Idaho, Montana, and Wyoming. Overall, the winter weather set the stage for a below normal fire season that would bring minimal activity in the spring with some increased activity during the late summer months.

January - April

Although snow pack and precipitation were above normal in most areas, the southeastern United States experienced one of the most active spring fire seasons in five years. Initial attack activities started as early as February and large fires were occurring by April. A Type II and a Type I Incident Management Team were mobilized for fires in the Southern Area. Overall, more than 200 overhead personnel and 39 crews supported fire activities during the Southern Area's spring fire season.

In the southwest, airtankers were activated early due to fires in the lower elevations. Meanwhile low pressure systems in the west, provided cool and unsettled weather in March and April. In fact, California was at 208% of normal precipitation with the Sierra Nevada reporting record snow pack.

May

In May, cool conditions continued to dominate weather over most of the western United States, keeping fire activity to a minimum. The Southwest Area, experiencing moderate fire activity, mobilized a Type II Interagency Management Team for the Bureau of Land Management's (BLM) Icehouse Fire. In the Eastern Area, brief periods of high fire danger were reported.

Alaska experienced high temperatures during the first part of the month which resulted in moderate fire activity. However, by May 20, cool and unsettled weather returned to Alaska with a corresponding decrease in fire activity.

Fire Activity Summary

Photo: USDA Forest Service

June

A series of low pressure systems continued to rotate through the northern states during June, causing damp conditions to persist in the Northwest, Northern Rockies, Rocky Mountain, Great Basin, and Northern California Areas. The desert areas of the southwest experienced moderate fire activity.

On June 27, three days of thunderstorm activity started over 200 f ires in the Southwest Area, most of which were contained in the initial attack stage. A few dry thunderstorms occurred during this period resulting in some extended attack fires.

The Lake States reported high fire danger and above average fire activity. A Type II Incident Management Team was mobilized to the Gunflint Complex on the Superior National Forest. The Gunflint fires burned more than 2,300 acres before containment on July 5.

Meanwhile, Southern California continued to experience moderate fire activity, most of which occurred on California Department of Forestry (CDF) protection.

In addition to moderate activity in the United States, Canada experienced large fire activity. The United States provided considerable assistance to the Provinces in Canada throughout the month. Assistance included: IR Flights, 9 Interagency Hotshot Crews, several 5-Member Sustained Action Crews, Communications Technicians and miscellaneous supplies and equipment.

Fire Activity Summary

July

Except for the Southwest Area, fire activity in July was well below normal. In fact, Alaska experienced its third consecutive below normal fire season.

Moderate activity continued in the desert areas of the southwest. Several Type II Incident Management Teams were mobilized, however all fires were contained within 72 hours. On July 8 and 9, 21 Interagency Hotshot Crews, 6 helicopters, and 19 airtankers were mobilized to the Southwest Area from other geographic areas. Monsoon moisture arrived on July 16, and resources were demobilized by July 20.

Southern California and Great Basin Areas experienced several large grass and brush fires during the first three weeks of July. California Department of Forestry (CDF) remained particularly busy with large fire activity.

Photo: USDA Forest Service

Hot dry conditions occurred throughout the west and near record highs were being reported in the southwest and southern California. By Friday, July 27, significant fire activity was reported in the Southwest, Northwest and Great Basin Areas. Type II Incident Management Teams were mobilized for several fires in the Southwest and Northwest Areas. An upper level low moved through Southern Oregon, Idaho, Great Basin, Rocky Mountain, and Northern Rockies Areas that triggered several violent dry lightning storms that started over 400 fires.

Fire Activity Summary

The Rocky Mountain Area was also busy as a result of dry lightning. A Type I Incident Management Team was mobilized to manage Bureau of Land Management fires.

Monsoon moisture was weak and sporadic during July causing the southwest to experience an extended fire season. On July 30 that the National Fire Preparedness level was raised to Level III.

August

Significant large fire activity in the Southwest and Great Basin, and Pacific Southwest Areas carried over from July until August 11, when precipitation decreased the spread and ignition of large fires. The Northern Rockies and the Northwest Areas continued to experience below normal fire activity. On August 14, the National Fire Preparedness Level was lowered to Level II where it remained for the rest of the month.

One significant fire during August was the Pony Fire, on the Klamath National Forest. The fire, which started on August 2, required over 900 personnel and burned 2,095 acres. Another large fire, the Sag Corridor Fire on the Superior National Forest, burned approximately 3,900 acres in the United States and approximately 8,700 acres in Canada. A type II Incident Management Team was mobilized for this fire.

Due to severe drought conditions, Long Island, New York also experienced large fire activity. The non-federal large fires of the Sunrise Complex were suppressed by utilizing a Type I Interagency Management Team, 6 Interagency Hotshot Crews and Military Aerial Firefighting System aircrafts.

During the last week of August, extreme burning conditions were reported in southern California. There were several large fires, including the El Monte on the Cleveland National Forest which burned 8,100 acres.

As in June, the United States again provided support to Canada, including: 23 Interagency Hotshot Crews, several hundred saw and pump kits, personnel assistance on the mop-up of the Sag Corridor Fire and 4 NIFC jet transport trips for mobilization and demobilization of Canadian Crews.

September

Moderate fire activity was reported during September. On September 4 and 5, dry lightning started several fires in the Northwest and Northern Rockies. The Chelan Complex on the Wenatchee National Forest and the Crown Butte Fire, Crow Agency, BIA, both started from dry lightning. A Type I Incident Management Team managed the Chelan Complex and a Type II Incident Management Team handled the Crown Butte Fire. Another dry lightning storm on September 14, started over 300 fires in northern California, Oregon and northern Nevada.

Fire Activity Summary

By the end of the month the northern states were once again experiencing cool moist weather. However, fire danger in California remained in the high to very high range.

Photo: USDA Forest Service

October - December

While there was some minor fire activity throughout the west, most of the activity during October, was confined to California. By November 1, most of the West had received rain and the fire danger had lowered. However, southern California continued to experience moderate fire activity through early December. On November 27, California Department of Forestry reported several large fires due to a moderate Santa Ana wind event. Two California National Guard MAFFS units were mobilized on November 27. They were released on November 30, having dropped 6,000 gallons of retardant.

Summary

During this rather mild fire season, the most notable accomplishment was the emphasis placed on safe practices. In terms of severity and potential, the 1995 season was below average. The National Fire Preparedness Level never exceeded Level III and there were no periods of significant national mobilization. For all the reasons listed above, the 1995 season provided fire agencies a much needed break from fire mobilization after the extraordinary season of 1994.

Large Wildfire Occurrence Report

In 1995 there were 54 class F and G wildfires (over 1,000 acres) which burned land totalling 233,199 acres. Acreages listed represent the total acres burned on each fire, and include acreages for all land ownerships under Forest Service protection.

1. No fires were reported on National Forest Land in the State of Maine.
2. National Forest acreage in the States of Connecticut and Hawaii is research and/or experimental land only.
3. There are no National Forest lands in the following States: Delaware, Iowa, Maryland, Massachussets, New Jersey, and Rhode Island.

The United States Department of Agriculture (USDA) prohibits discrimination in its programs on the basis of race, color, national origin, sex, religion, age, disability, political beliefs, and marital or familial status. Not all prohibited bases apply to all programs.) Persons with disabilities who require alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact the USDA Office of Communications at (202) 720-5881 or (202) 720-7808 (TDD).

To file a complaint, write the Secretary of Agriculture, U.S. Department of Agriculture, Washington, D.C. 20250 or call (202) 720-7327 (voice) or (202) 720-1127 (TDD). USDA is an equal employment opportunity employer.
